

TEST 8

Part 1

Question	Answer	Location	Explain
1	25	Speaker A: At Red Rock, you have to pay more, but you get running water there. Speaker A: Those sites are twenty-five dollars.	- Đáp án là 25 - Câu hỏi hỏi giá tại campsite có running water → chính là Red Rock. - Script nêu rõ “twenty-five dollars”. - Key word: + running water (n): nước máy + dollars (n): đô la
2	form	Speaker A: Otherwise, there's a self-registration process. Speaker A: You fill out a form and then you deposit that with your fee in the iron box.	- Đáp án là form - “fill out a form” → điền form rồi bỏ vào hộp cùng tiền. - Key word: + fill out (v): điền + form (n): mẫu đơn
3	showers	Speaker A: Well, there aren't any laundry areas in the park, and the only campground where you'll get showers is Red Rock. Speaker A: But all of the sites have picnic tables and fire grates.	- Đáp án là showers - “only... get showers is Red Rock” → không có ở nơi khác. - Đề: “no... except at Red Rock” → showers. - Key word: + showers (n): vòi tắm + campground (n): khu cắm trại
4	drinking	Speaker A: There's none at the campsites, but you can fill up your bottles at the visitor centers. Speaker A: There's one at each of the entrances to the park.	- Đáp án là drinking - “fill up your bottles” → nước uống. - Đề: “___ water is available” → drinking water. - Key word: + bottles (n): chai nước + visitor centers (n): trung tâm du khách
5	electricity	Speaker B: Fine. And I assume there's no electricity at the campsites? Speaker A: That's right. Although if you want to bring your own generator, that's fine.	- Đáp án là electricity - Script: “no electricity at the campsites”. - Key word: + electricity (n): điện + generator (n): máy phát điện

6	office	Speaker A: It has to be purchased in the office, which is right where you enter the park. Speaker A: And while we're talking about regulations, keep in mind that quiet hours are from 10 p.m. to 6 a.m.	- Đáp án là office - “purchased in the office” → mua gỗ tại văn phòng. - Key word: + purchased (v): mua + office (n): văn phòng
7	K-Stone	Speaker A: First, there's the K-Stone Trail. Speaker B: Sorry?	- Đáp án là K-Stone - Script nêu rõ tên trail. - Key word: + trail (n): đường mòn + K-Stone (n): tên riêng
8	sand	Speaker A: No, but for the first part, you have to go through a lot of sand, which is really hard work. Speaker A: After that, there is a plain, which is rough going because it's full of rocks.	- Đáp án là sand - “first part... sand” → phù hợp cấu trúc “___ then a rocky plain”. - Key word: + sand (n): cát + plain (n): đồng bằng
9	lake	Speaker A: It starts off quite level because you're going along what was once a lake, though it's dried up now for most of the time. Speaker A: Then you leave that and climb up a hill to get to your destination.	- Đáp án là lake - Script: “once a lake” → đi qua khu hồ khô. - Key word: + lake (n): hồ + dried up (adj): khô cạn
10	mine	Speaker A: Not a town, but something else abandoned. A mine. Speaker A: You can go in, but we do advise extreme caution.	- Đáp án là mine - “abandoned... a mine” → đặc điểm đặc biệt. - Key word: + mine (n): mỏ + abandoned (adj): bị bỏ hoang

You will hear a telephone conversation between an American park ranger and a woman who plans to camp in the park.

First, you have some time to look at questions one to six.

You will see that there is an example that has been done for you.

On this occasion only, the conversation relating to this will be played first.

Speaker A: Desert Highlands National Park.

Speaker B: Hello, my friends and I are interested in camping at Desert Highlands, and I have a few questions.

Speaker A: Well, we have nine campgrounds to choose from and they are open all year long.

The number of campgrounds is nine, so nine has been written in the space.

Now we shall begin.

You should answer the questions as you listen because you will not hear the recording a second time.

Listen carefully and answer questions one to six.

Speaker A: Desert Highlands National Park.

Speaker B: Hello, my friends and I are interested in camping at Desert Highlands, and I have a few questions.

Speaker A: Well, we have nine campgrounds to choose from and they are open all year long.

Speaker B: Are there any campsites where we can make reservations?

Speaker A: Yes, but only one. That's Red Rock Campsite. It's the biggest site.

Speaker B: Okay. Now, my friend told me it costs just ten dollars to camp in the National Park. Is that right?

Speaker A: Well, we've had to increase the fees because of cuts in government support. So most of the sites are fifteen dollars per night.

Speaker A: At Red Rock, you have to pay more, but you get running water there. Those sites are twenty-five dollars.

Speaker B: That's okay. And how do we pay?

Speaker A: Well, if there's a member of staff on duty, just pay them directly.

Speaker A: Otherwise, there's a self-registration process.

Speaker A: You fill out a form and then you deposit that with your fee in the iron box.

Speaker A: There's one located at the entrance of each campground.

Speaker A: They've got big pictures of park rangers on the front.

Speaker B: I take it that most of the campgrounds' facilities are rather primitive.

Speaker A: Well, there aren't any laundry areas in the park, and the only campground where you'll get showers is Red Rock.

Speaker A: But all of the sites have picnic tables and fire grates.

Speaker B: Okay. Well, that sounds fine.

Speaker B: What else? What's the situation as regards drinking water?

Speaker A: There's none at the campsites, but you can fill up your bottles at the visitor centers.

Speaker A: There's one at each of the entrances to the park.

Speaker B: Fine. And I assume there's no electricity at the campsites?

Speaker A: That's right. Although if you want to bring your own generator, that's fine.

Speaker A: Quite a lot of people do.

Speaker B: I don't think we'll bother.

Speaker B: I'm glad there's a fire grate, though. Sitting around the campfire at night is one of the best things about camping.

Speaker A: Well, do keep in mind that according to the regulations, you're not allowed to cut or gather any vegetation while you're in the park, nor can you bring your own wood for the fire with you.

Speaker A: It has to be purchased in the office, which is right where you enter the park.

Speaker A: And while we're talking about regulations, keep in mind that quiet hours are from 10 p.m. to 6 a.m.

Speaker B: All right. I guess we'll just enjoy lots of stargazing.

Before you hear the rest of the conversation, you have some time to look at questions 7 to 10. Now listen and answer questions 7 to 10.

Speaker B: We all like mountain biking, and we're hoping that there are some nice trails.

Speaker A: Yes, you can pick up trail maps at the visitor centers.

Speaker A: But let me tell you about some special features.

Speaker B: Thanks.

Speaker A: First, there's the K-Stone Trail.

Speaker B: Sorry?

Speaker A: K-Stone. That's K-A-I-S-T-O-N-E.

Speaker A: It's the longest trail, and it's probably one of the most difficult, too.

Speaker B: Why is that? Is there an incline?

Speaker A: No, but for the first part, you have to go through a lot of sand, which is really hard work.

Speaker A: After that, there is a plain, which is rough going because it's full of rocks.

Speaker A: If you're looking for a really challenging workout, that's the one for you.

Speaker A: Then there's the Old Glen Road.

Speaker A: That's a good trail for an afternoon, and it ends up in a really interesting location.

Speaker A: It starts off quite level because you're going along what was once a lake, though it's dried up now for most of the time.

Speaker A: Then you leave that and climb up a hill to get to your destination.

Speaker B: What's there?

Speaker A: I've heard that there's some interesting abandoned towns in the desert.

Speaker A: Not a town, but something else abandoned. A mine.

Speaker A: You can go in, but we do advise extreme caution.

Speaker B: Thank you very much.

Speaker B: Well, I'm really looking forward to visiting the park now.

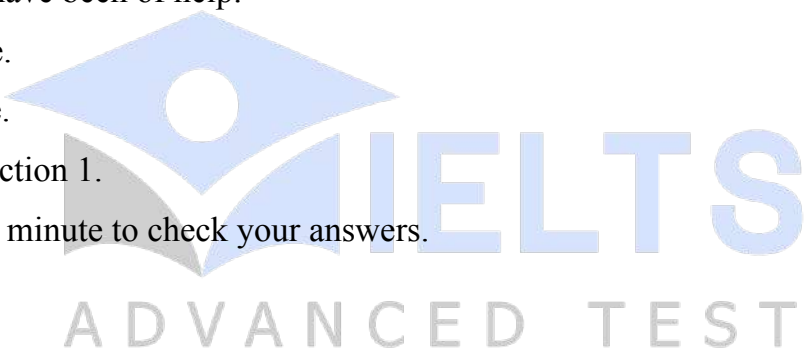

Speaker A: Glad to have been of help.

Speaker A: Goodbye.

Speaker B: Goodbye.

That is the end of Section 1.

You now have half a minute to check your answers.

Part 2

Question	Answer	Location	Explain
11	C	<i>But Adbourne had run a classical music festival, which had been becoming less and less popular in recent years. Joanne was looking around for something to replace it and to use funds allocated to it to promote something which local people can enjoy.</i>	- Đáp án là C - Script: “to use funds allocated to it” → dùng tiền từ dự án cũ. - A sai vì không nói đến việc khuyến khích làm phim. - B sai vì không nhắc đến thu hút khách du lịch. - Key word: + funds (n): ngân sách + allocated (adj): được phân bổ
12	C	<i>Under 12s used to get in for 50p, but now we charge just one pound, which is still very good value. £1.50 for students and £2.50 for everyone else.</i>	- Đáp án là C - Giá thấp nhất: £1.50 (students), cao nhất: £2.50 → khoảng £1.50–£2.50. - A, B sai vì không khớp range thực tế. - Key word: + charge (v): thu phí + value (n): giá trị

13	A	<i>If you're interested in attending any performance, you can buy tickets online, of course, and you can also get them in the library, which is right next to the main shopping area. I'm afraid this year tickets are no longer available from either of the two cinemas because of restricted opening times.</i>	- Đáp án là A - “get them in the library” → từ thư viện địa phương. - B sai vì không có “several shops”. - C sai vì “no longer available from cinemas”. - Key word: + library (n): thư viện + available (adj): có sẵn
14	C	<i>Last year, for example, the theme was Future Planet and the winner was a ten-minute documentary encouraging youngsters to be more aware of environmental issues, focusing on getting school kids to cycle to school instead of going by car. This year, the theme is Sporting Nation, so there'll also be lots of ideas to choose from.</i>	- Đáp án là C - “cycle to school instead of car” → phương tiện giao thông xanh. - A, B không được nhắc. - Key word: + cycle (v): đi xe đạp + environmental issues (n): vấn đề môi trường
15	B	<i>Now, we're always on the lookout for new local talent, so if you live in the Adbourne area and are under 18, you should have a go. We have an excellent prize every year donated by local businesses, shops, hotels, etc.</i>	- Đáp án là B - Prize: “high-spec movie camera” → thiết bị làm phim. - A, C sai vì không phải khách sạn hay tiền. - Key word: + prize (n): giải thưởng + camera (n): máy quay
16	C	<i>Application forms are on the website, and the deadline for sending in your film to enter the competition is the last day of July. It's May now, so you'll have the whole of June to be working on it.</i>	- Đáp án là C - “last day of July” → end of July. - Key word: + deadline (n): hạn chót + enter (v): tham gia
17	D	<i>Instead, we're looking for a new angle, a fresh way of looking at a theme. And of course, because it's a short film festival, it's not really about a fully worked story with well-rounded characters.</i>	- Đáp án là D - “good photography, conveying things visually” → quality of photography. - Key word: + photography (n): quay/chụp hình + visually (adv): bằng hình ảnh

18	E	<i>Well, although we choose very topical issues like the environment, we're not looking for propaganda, you know, trying to get people to do something. Instead, we're looking for a new angle, a fresh way of looking at a theme.</i>	- Đáp án là E - “new angle, fresh way” → originality. - Key word: + angle (n): góc nhìn + fresh (adj): mới
19	C	<i>One thing we probably will change next year, though, is we want to add another class and another prize for older filmmakers. We'll keep it at a maximum of ten minutes, though.</i>	- Đáp án là C - “add another class” → thêm nhóm tuổi. - Key word: + class (n): nhóm/loại + filmmakers (n): người làm phim
20	A	<i>We also want to use different venues for the film shows, such as community centres and at least one school. It might make performances more accessible to a wider audience.</i>	- Đáp án là A - “use different venues” → thay đổi cách tổ chức/đánh giá (gián tiếp thay đổi hệ thống). - B sai vì “length... keep same”. - Key word: + venues (n): địa điểm + accessible (adj): dễ tiếp cận

You will hear a talk on local radio about a short film festival in the town of Adbourne.

Now you have some time to look at questions 11 to 16.

Now listen and answer questions 11 to 16.

Today we're pleased to have on the show Fatima Johnson, who is the organiser of the Adbourne Film Festival. Welcome, Fatima.

Hello.

Can you tell us a bit about the background to the festival and what it brings to the town?

Well, the festival was started in 1996 by the then mayor of Adbourne, Joanne Smith.

She wasn't a filmmaker herself.

She'd actually been a very energetic tourism development officer for many years.

But Adbourne had run a classical music festival, which had been becoming less and less popular in recent years.

Joanne was looking around for something to replace it and to use funds allocated to it to promote something which local people can enjoy.

Great. So tell us about the festival nowadays.

Well, it's held in the last two weeks of August every year and short films from all over the world are shown in three places, in the theatre and our two cinemas.

Several films are shown in one performance and the whole thing lasts about 90 minutes.

Tickets are very reasonably priced.

Under 12s used to get in for 50p, but now we charge just one pound, which is still very good value. £1.50 for students and £2.50 for everyone else.

Performances are advertised all around town and also on our website, www.adbournefest.com.

If you're interested in attending any performance, you can buy tickets online, of course, and you can also get them in the library, which is right next to the main shopping area.

I'm afraid this year tickets are no longer available from either of the two cinemas because of restricted opening times.

I understand you also run a film competition?

Yes, for under 18s.

We have a different theme every year.

Last year, for example, the theme was Future Planet and the winner was a ten-minute documentary encouraging youngsters to be more aware of environmental issues, focusing on getting school kids to cycle to school instead of going by car.

This year, the theme is Sporting Nation, so there'll also be lots of ideas to choose from.

Now, we're always on the lookout for new local talent, so if you live in the Adbourne area and are under 18, you should have a go.

We have an excellent prize every year donated by local businesses, shops, hotels, etc.

This year, you can win a high-spec movie camera worth over £800.

Application forms are on the website, and the deadline for sending in your film to enter the competition is the last day of July.

It's May now, so you'll have the whole of June to be working on it.

Now you have some time to look at questions 17 to 20.

Now listen and answer questions 17 to 20.

And what are the judges looking for?

Well, although we choose very topical issues like the environment, we're not looking for propaganda, you know, trying to get people to do something.

Instead, we're looking for a new angle, a fresh way of looking at a theme.

And of course, because it's a short film festival, it's not really about a fully worked story with well-rounded characters.

It's more about good photography, conveying things visually.

And who judges the films?

A panel of three people who know a lot about film.

We've used the same judges for many years and we're very happy with their expertise.

One thing we probably will change next year, though, is we want to add another class and another prize for older filmmakers.

We'll keep it at a maximum of ten minutes, though.

The length works well for our festival.

We also want to use different venues for the film shows, such as community centres and at least one school.

It might make performances more accessible to a wider audience.

We did explore the possibility of having late-night showings, but that's unlikely to happen in the coming year.

So, as I say, if anyone's interested in submitting a film for our competition, go on to our website and you'll be able to access everything...

Part 3

Question	Answer	Location	Explain
21	B	It hops onto a bee. Then when the bee lands on a flower, the mite gets off and waits for another bee to come along.	- Đáp án là B - “lands on a flower → mite gets off” → di chuyển từ bee sang flower. - Key word: + lands (v): hạ xuống + flower (n): hoa
22	C	The mite then hitches a ride back to the hive where the bee lives with the rest of the colony. Speaker A: So the mite actually sneaks inside the hive on top of the bee's back.	- Đáp án là C - “ride back to the hive” → đến hive trên host mới. - Key word: + hive (n): tổ ong + colony (n): đàn
23	D	Well, no. That's the interesting part. It uses the honey to cover its scent so it won't be detected.	- Đáp án là D - “uses the honey to cover its scent” → dùng mật ong để che mùi. - Key word: + honey (n): mật ong + scent (n): mùi
24	A	And presumably it lives off the blood of the bees. Speaker B: That's right. It feeds on the bee larva that hatches out from the egg.	- Đáp án là A - “lives off the blood” → feeds on blood của larva. - Key word: + blood (n): máu + feeds on (v): ăn
25	G	Well, it leaves them debilitated. And it also infects them with a virus that spreads amongst the colony.	- Đáp án là G - “infects... with a virus” → bee bị virus. - Key word: + infect (v): lây nhiễm + virus (n): virus

26	E	Speaker A: Yes, but the problem is that the bumblebee has a tendency to carry weeds to nearby farmland. They would also compete for nectar with your existing bees.	- Đáp án là E - “carry weeds” → spreads weeds. - Key word: + weeds (n): cỏ dại + farmland (n): đất nông nghiệp
27	C	Speaker B: That's one of the challenges we face because there hasn't been a lot of research on it as yet. Speaker A: Well, it's better to use native bees because importing them can be disastrous.	- Đáp án là C - “hasn't been a lot of research” → not much is known. - Key word: + research (n): nghiên cứu + challenges (n): thách thức
28	F	It was introduced into South America because it was a good honey producer. But what they didn't realise was that it attacks anything that moves.	- Đáp án là F - “attacks anything that moves” → too aggressive. - Key word: + attacks (v): tấn công + aggressive (adj): hung hãn
29	B	The main drawback with the stingless bees is that they're quite sensitive to temperature. They just won't fly if it gets below 18 degrees, so they aren't really suited to southern parts of Australia.	- Đáp án là B - “won't fly if below 18°” → needs warm climate. - Key word: + temperature (n): nhiệt độ + sensitive (adj): nhạy cảm
30	D	Yes. Of course, the only drawback is that we can't bring in very many at a time, so we still don't have enough of them here to really make much difference to our crop yields. Speaker B: Yes, it takes time to build up a bee population.	- Đáp án là D - “don't have enough... to make much difference” → too few numbers. - Key word: + enough (adj): đủ + population (n): quần thể

Section 3

You will hear two researchers comparing their research on different types of bees.

First you have some time to look at questions 21 to 25 on page 5. Now listen carefully and answer questions 21 to 25.

Speaker A: Have you had a chance to look at our research on Australian native bees?

Speaker B: Yes, it's very relevant to my research on European bees.

Speaker A: What aspect do you think is most relevant?

Speaker B: Well, as you know, my main research interest is the European honeybee and the problems facing it.

Speaker A: Yes, I've heard about the Varroa mite, but I don't know much about it.

Speaker B: Well, it almost wiped out the European honeybee population in North America back in the 1980s.

Speaker A: Thankfully we don't have it here in Australia yet. It sounds like a nasty little creature.

Speaker B: Certainly is. It's like a little hitchhiker really. It hops onto a bee. Then when the bee lands on a flower, the mite gets off and waits for another bee to come along.

Speaker A: And from there, I guess the mite climbs onto another bee.

Speaker B: Right. The mite then hitches a ride back to the hive where the bee lives with the rest of the colony.

Speaker A: So the mite actually sneaks inside the hive on top of the bee's back.

Speaker B: That's right. And once it's there, it dives into a honeycomb cell and heads straight for the bottom. That's where the queen bee's eggs are.

Speaker A: And the honey.

Speaker B: Yes. And the mite buries itself deep inside it.

Speaker A: Ah, I see. The mite doesn't eat the honey though, does it?

Speaker B: Well, no. That's the interesting part. It uses the honey to cover its scent so it won't be detected.

Speaker A: And presumably it lives off the blood of the bees.

Speaker B: That's right. It feeds on the bee larva that hatches out from the egg. The mite's reproductive cycle takes place there too while it's living in the cell. When that's finished, it leaves.

Speaker A: It sounds like a clever enemy. But why does it have such a devastating effect on bee populations?

Speaker B: Well, it leaves them debilitated. And it also infects them with a virus that spreads amongst the colony.

Speaker A: If the population dies out here in Australia, it will have a devastating effect on Australian agriculture.

Speaker B: The worrying thing is that we do need to find a way of increasing our bee population. Before you hear the rest of the discussion, you have some time to look at questions 26 to 30 on page 6.

Now listen and answer questions 26 to 30.

Speaker B: Well, perhaps we can combine my research on European bees and yours on Australian native bees to put together a research proposal and find a way of safely increasing the Australian bee population.

Speaker A: That would be great. Let's compare notes.

Speaker B: OK then. Let's start with the European bumblebee. There's been a lot of talk recently about bringing them into this country.

Speaker A: Yes, but the problem is that the bumblebee has a tendency to carry weeds to nearby farmland. They would also compete for nectar with your existing bees.

Speaker B: You know, there's an Australian native bee, the blue-banded bee, which is good at pollinating without carrying weeds. It could be useful to farmers.

Speaker A: The blue-banded bee? I've never heard of that one.

Speaker B: That's one of the challenges we face because there hasn't been a lot of research on it as yet.

Speaker A: Well, it's better to use native bees because importing them can be disastrous. The Africanized bee is a case in point. It was introduced into South America because it was a good honey producer. But what they didn't realise was that it attacks anything that moves.

Speaker B: Speaking of honey producers, the Australian stingless bee is a good alternative source of honey.

Speaker A: Oh, I didn't know they produced honey.

Speaker B: Yes, although they don't produce as much as other bees do. The main drawback with the stingless bees is that they're quite sensitive to temperature. They just won't fly if it gets below 18 degrees, so they aren't really suited to southern parts of Australia.

Speaker A: I know how you feel about foreign bees, but I think my favourite bee is a Canadian leafcutter bee. It has such a gentle personality, but it's really hard-working too and it's got a lot of potential for farmers.

Speaker B: Why is that?

Speaker A: Well, I've been asked to help import them to this country to pollinate the lucerne or alfalfa crops. At the moment, Australian production is about a third of that in North America, where they have these leafcutter bees.

Speaker B: That's quite a difference. But is it safe to import these bees?

Speaker A: Well, our research shows that it is, so they've been importing them in very limited numbers. They have to be thoroughly checked first before they're released to make sure that they don't have any mites or diseases.

Speaker B: Well, that's good.

Speaker A: Yes. Of course, the only drawback is that we can't bring in very many at a time, so we still don't have enough of them here to really make much difference to our crop yields.

Speaker B: Yes, it takes time to build up a bee population.

That is the end of Section 3. You now have half a minute to check your answers.

Part 4

Question	Answer	Location	Explain
31	frame	<i>When the artist is preparing to hang on a display, he or she has to stretch the canvas to fit it over a frame. And this can result in the ripping of the canvas.</i>	- Đáp án là frame - “stretch the canvas to fit it over a frame” → căng lên khung gây rách. - Key word: + stretch (v): kéo căng + frame (n): khung
32	dirt	<i>Over a year, a painting can change from being quite bright to appearing dull. This is often due to the collection of dirt on the surface of the work.</i>	- Đáp án là dirt - “collection of dirt” → bụi bẩn làm giảm độ sáng. - Key word: + dirt (n): bụi bẩn + surface (n): bề mặt
33	sun	<i>If a painting is hung in a round place, particularly in the tanning of the sun, this fades the paint and its appearance. This happens not just hanging the painting, also in storing them.</i>	- Đáp án là sun - “tanning of the sun” → ánh sáng mặt trời làm phai màu. - Key word: + sun (n): mặt trời + fade (v): phai màu
34	crack	<i>When artists want to store the painting, it's common for them to roll it up for storage. This process can result in a crack in the paint.</i>	- Đáp án là crack - “result in a crack” → xuất hiện vết nứt. - Key word: + crack (n): vết nứt + roll up (v): cuộn lại

35	temperature	<i>For example, the paint can become sticky. This can be a very serious problem, which can be caused by even the minimum change of temperature.</i>	- Đáp án là temperature - “change of temperature” → nhiệt độ gây dính. - Key word: + temperature (n): nhiệt độ + sticky (adj): dính
36	wax	<i>Restorers used to try to make canvas stronger, and they put something onto the work. Part of its processing involved putting wax on the back of the canvas.</i>	- Đáp án là wax - “putting wax on the back” → tăng độ bền canvas. - Key word: + wax (n): sáp + canvas (n): vải vẽ
37	microscopes	<i>Restorers often use microscopes so they can analyze the materials thoroughly. For restoration involves cleaning the surface of the painting, restorers use sponges made from cotton to gently clean the work.</i>	- Đáp án là microscopes - Script nói rõ dùng kính hiển vi để kiểm tra. - Key word: + microscope (n): kính hiển vi + analyze (v): phân tích
38	cotton	<i>For restoration involves cleaning the surface of the painting, restorers use sponges made from cotton to gently clean the work. You might be curious about what is used to clean the paintings.</i>	- Đáp án là cotton - “sponges made from cotton” → bọt biển từ cotton. - Key word: + cotton (n): bông + sponge (n): miếng bọt
39	chemicals	<i>Because some very old paintings were covered with varnish, chemicals cannot be used for cleaning due to the fact that they can remove or damage the varnish layer. But restorers have to use something to clean the paintings.</i>	- Đáp án là chemicals - “chemicals cannot be used” → không dùng hóa chất. - Key word: + chemicals (n): hóa chất + varnish (n): lớp sơn phủ
40	saliva	<i>The most common liquid used in cleaning is human saliva. It does a great job of cleaning the painting.</i>	- Đáp án là saliva - Script: “human saliva” → nước bọt. - Key word: + saliva (n): nước bọt + liquid (n): chất lỏng

Now listen carefully and answer questions 31 to 40.

Welcome to today's lecture about restoration of paintings.

We all know that no matter how carefully a painting is stored or handled, it can be damaged. It's the job of a restorer to fix this damage. But to do so and return the painting to the original appearance, we need to know about the material that the artist used when creating it. So the first stage to a restorer is to determine what kind of paint applied to what kind of surface.

The restoration process also involves the determinants of what kind of damages have been done to the artwork. There are several damages included.

When the artist is preparing to hang on a display, he or she has to stretch the canvas to fit it over a frame. And this can result in the ripping of the canvas. A restorer needs to be able to fix this kind of problem and hopefully make preparation from the beginning.

And another thing is time. This can be excessive damage to the art. Over a year, a painting can change from being quite bright to appearing dull. This is often due to the collection of dirt on the surface of the work. This all needs to be removed. And was almost the common task the restorers performed.

Another problem is the paintings. It's fading with the colors. If a painting is hung in a round place, particularly in the tanning of the sun, this fades the paint and its appearance. This happens not just hanging the painting, also in storing them.

When artists want to store the painting, it's common for them to roll it up for storage. This process can result in a crack in the paint. Some artists such as Picasso said he might disagree. But it's possible that the paint could cut off from the canvas entirely. Something that a short-broke artist wouldn't like.

It's important that when we're restoring the paintings to consider how they react to things in the environment. For example, the paint can become sticky. This can be a very serious problem, which can be caused by even the minimum change of temperature. This is something else to watch for.

A lot of damage to artworks because of the restorers themselves. Restorers used to try to make canvas stronger, and they put something onto the work. Part of its processing involved putting wax on the back of the canvas. But this leaves visible marks to the surface of the paintings. Hopefully, nowadays, we can prove scientific knowledge restoration can avoid making similar errors.

Restorers have several tools of exposures. Some are high-tech, others, surprisingly, low-tech. It's not that common to see a restorer examine an ink painting to use a certain tool to eliminate the mud

living under the surface of the paint. But it's important to analyze what kind of paint or materials that artists used.

Restorers often use microscopes so they can analyze the materials thoroughly. For restoration involves cleaning the surface of the painting, restorers use sponges made from cotton to gently clean the work.

You might be curious about what is used to clean the paintings. Because some very old paintings were covered with varnish, chemicals cannot be used for cleaning due to the fact that they can remove or damage the varnish layer. But restorers have to use something to clean the paintings. This is where the low-tech tools come in.

The most common liquid used in cleaning is human saliva. It does a great job of cleaning the painting. It doesn't cause damage.
