Time 1 hour

INSTRUCTIONS TO CANDIDATES

Do not open this question paper until you are told to do so.

Write your name and candidate number in the spaces at the top of this page.

Read the instructions for each part of the paper carefully.

Answer all the questions.

Write your answers on the answer sheet. Use a pencil.

You must complete the answer sheet within the time limit.

At the end of the test, hand in both this question paper and your answer sheet.

INFORMATION FOR CANDIDATES

There are **40** questions on this question paper.

Each question carries one mark.

READING PASSAGE 1

You should spend about 20 minutes on Questions 1–13, which are based on Reading Passage 1 below.

Keeping Healthy at Work

Programmes to improve how well employees feel

Being a responsible employer in New Zealand used to require a fairly short checklist: a regular salary or wages, a safe working environment, and that was about it. But these days, the checklist is growing, and companies are increasingly expected to play a much greater role in the health and wellbeing of their employees. Definitions of workplace wellness or wellbeing vary, but the World Health Organisation's definition extends the employer's responsibilities beyond safety concerns and into the wider workplace environment. Today, this means things like the boss making sure their staff aren't bored or feeling undervalued, and company trying to minimise the pressure and tensions that are experienced in the workplace. It could also involve providing 'wellness programmes' that consider all these factors and help staff to lead healthier lifestyles.

This approach has found some support among employers in New Zealand. The organisation Business NZ conducted research in 2013 that found that 9 out of 10 businesses believed employee wellbeing and contentment was either desirable or a priority. It was also found that 61% of New Zealand companies with more than 100 employees now have a wellness programme. Others may join in since the Health and Safety at Work Act came into being. The emphasis of the law is still on preventing physical injury at work, but a spokesperson says that a significant focus is now also the need for employers to take an active role in the wider health and wellbeing of staff.

Kelly Davis Martin is the director of Achieve Wellness, which helps companies set up wellness programmes. She says the increase in companies looking to set up programmes is positive, but she would like to see a lot more being done. 'We need to make sure these programmes are worthwhile and contribute to real change,' she says. This is supported by data from the Productivity Commission, which shows that New Zealanders work as hard as employees in other western countries, but produce less. This means that they need to work smarter, not harder, and wellness programmes might help with that.

Insurance provider Accident Compensation Corporation is one New Zealand organisation that has recently set up a wellness programme. The first initiative involves the 2,000 staff taking part in a special challenge, where teams compete with each other to see who can walk the furthest in a week. A spokesperson says there is no single reason behind the programme, except that it is an essential part of keeping staff healthy. Phone company 2degrees Mobile also began its first wellness programme recently. Manager Sarah Friis says the company was looking to increase staff engagement and show employees they were of value. The company has close to 800

employees, and its programme was established by eight volunteers from around the business. A range of initiatives were included in the programme, such as sports events and team challenges, and vaccinations were offered against things like influenza for which there was no charge. This year 2degrees has taken professional advice, but Friis says their programme is still internally run because this is vital to keeping the energy going and getting feedback on what is working and what needs to be changed. It now has an online facility which allows employees to keep up to date with all the latest advice on health and wellness. Two years in, Friis says one of the obvious benefits is a sense of greater unity, which she believes has been achieved by all staff eating a healthy lunch as a group every now and again. A more measurable benefit was shown in the 2degrees staff survey, which the company conducts every year, showing that more staff now recognise that 2degrees cares about the wellness of its employees.

One further New Zealand company that is developing its wellness programme is Sovereign Insurance. CEO Symon Brewis-Weston says that when he started at the company, the existing programme was satisfactory, with a number of employees using the opportunity to receive counselling. But he wanted more people to become involved and decided to include activities that created more staff interest. So the new scheme offers financial contributions for employee sports' teams and discounts on the likes of dental treatment. The company also has quarterly wellbeing challenges, including one where staff cut down on sugar and got tips on ways to reduce their daily intake. About 50% of staff took part, says Brewis-Weston.

Interestingly, however, some research from the USA, where wellness programmes have been in place much longer, suggests that the initiatives are not always as impressive as you might think. One study suggests that participants lost an average of less than half a kilogram a year, and that there were no significant reductions in the costs involved when it is necessary for employees to go to hospital for care. Meanwhile, the US book *Surviving Workplace Wellness* suggests that done badly, the programmes waste money and upset staff who feel they are made to take too many unnecessary tests. Given these findings, New Zealand companies will have to work hard to make sure their own wellness programmes achieve more success.

Questions 1–5

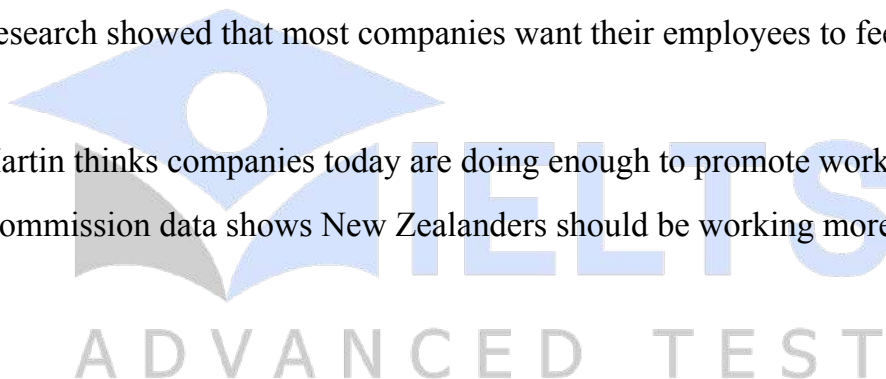

Do the following statements agree with the information given in Reading Passage 1? In boxes 1–5 on your answer sheet, write

TRUE if the statement agrees with the information

FALSE if the statement contradicts the information

NOT GIVEN if there is no information on this

1. New Zealand has a better workplace safety record than many other countries.
2. According to the World Health Organisation, companies today should be responsible for reducing workers' stress.
3. Business NZ research showed that most companies want their employees to feel positive about their work.
4. Kelly Davis Martin thinks companies today are doing enough to promote workers' wellness.
5. Productivity Commission data shows New Zealanders should be working more hours.

Questions 6–13

Complete the notes below.

Choose **ONE WORD ONLY** from the passage for each answer.

Write your answers in boxes 6–13 on your answer sheet.

Wellness programmes in companies

Accident Compensation Corporation

- a weekly competition to compare the distances that staff 6 _____ 2degrees Mobile
- set up a programme using staff members who were volunteers
- staff take part in sports events and are given free 7 _____
- employees get advice online and sometimes have 8 _____ together
- an annual 9 _____ suggests employees support the programme

Sovereign Insurance

- in the old programme, some staff had 10 _____
- the new programme offers fitness opportunities and 11 _____ care at reduced cost
- staff have received advice on how to consume less 12 _____

Programmes in the USA

- spending on hospital treatment has not fallen by much
- some staff do not like the number of 13 _____ involved in programmes

READING PASSAGE 2

You should spend about 20 minutes on Questions 14-26, which are based on Reading Passage 2.

Questions 14-20

Reading Passage 2 has seven paragraphs, A-G.

Choose the correct heading for each paragraph from the list of headings below.

Write the correct number, i-ix, in boxes 14-20 on your answer sheet.

List of Headings

- i.** Ray's account of his working methods
- ii.** The botanical expert who inspired Ray
- iii.** A succession of academic achievements
- iv.** Ray's informal tuition
- v.** Ray's appreciation of his contemporary academic culture
- vi.** A childhood interest in plants
- vii.** Plans for a bold new project
- viii.** A description of the content of Ray's first book
- ix.** A change of direction for Ray

John Ray and the Study of Plants

A The 17th-century English scholar and botanist John Ray was well aware that he lived through, and participated in, a profound revolution in the way people interacted with nature. In the preface to his *Synopsis of British Plants*, published in 1690, he gave thanks that he had been born at a time when traditional dependence on the teaching of the Greek philosopher Aristotle (384-322 BCE) had given way to a new philosophy, based on experiment and observation of the real world, that we now call science.

B Ray was born in 1627. His father was a village blacksmith, and his mother was also a respected member of the community, a healer who was an expert in folk medicine and the use of herbs to treat ailments. Ray must have stood out as an unusually bright boy among his schoolmates, and his talents were recognised by a church official, Samuel Covell, who had graduated from Cambridge University in 1600, and maintained his links with his university. Through his influence, Ray was admitted to Cambridge University in 1644 at the age of seventeen - a huge step for a village blacksmith's son. There he made a solid start, and quickly gained a reputation as a brilliant student. He studied the classics (Greek, Latin and Hebrew) and mathematics, but there was nothing yet we would now call science in the curriculum. After graduating in 1648, he became a minor member of staff at Trinity College, Cambridge. He was appointed Lecturer in Greek in 1651, Lecturer in Mathematics in 1653, and Lecturer in Humanities in 1655.

C Almost immediately after graduating, Ray also seems to have developed the interest to which he would devote the rest of his life: the study of the natural world. He explains this conversion into a naturalist - in particular into a botanist - in the preface to his first book, the *Cambridge Catalogue of English Plants*. Here Ray tells us that he suffered an illness in his early twenties, and was advised to take long walks and ride in the fresh air while recovering. While doing this, he became interested in the local flora, and finding nobody able to teach him, Ray investigated it for himself. He then went on to pass on the knowledge he acquired to others.

D By the mid-1650s, even the first-year students at Trinity College were able to identify the plants and flowers around Cambridge, as they were being taught (unofficially - none of this was part of their formal education) by Ray. Many of them were the sons of landowners, and so had a natural, if amateurish, interest in country matters. But a few of them took his efforts to understand the natural world much more seriously. One of these, Francis Willughby, later played an important part in Ray's life.

E Having himself had no authority on the subject of plants on which to draw, Ray also started work on what would become his Cambridge Catalogue of English Plants. The work was not published until 1660 because, as Ray explained in the preface, he had to start from scratch: "I had first to become familiar with the literature, to compare the plants that I found with the pictures, and when there seemed to be a resemblance, to go fully into any unknown descriptions. Gaining skill by experience, I acquired at last the ability to recognise to what tribe and family similars could be assigned; this taught me to search for similarities and saved a vast deal of labour... I was eager to make the most of this and was fortunate to share my enthusiasm with my friends..."

F Ray's Cambridge Catalogue of English Plants was much more than a simple list of species. It gave the names of plants found in the area around Cambridge and included information about where they grew and how common they were. In doing this, Ray was producing something that would be of practical use to students and other readers interested in the local natural world. At the same time, the book showed his determination to describe plants accurately, on the basis of direct examination rather than reliance on old authorities. In this respect, it reflected the spirit of the new learning that Ray admired.

G Ray's studies of plants were only the beginning of a much larger ambition. With the support of Francis Willughby, he began to imagine a more comprehensive investigation of nature, one that would attempt to classify living things according to careful observation of their shared characteristics. This was an ambitious undertaking, especially at a time when many aspects of the natural world remained poorly described. Yet Ray believed that by collecting evidence systematically and comparing related forms, it would be possible to build a more reliable understanding of nature than scholars had possessed before.

Questions 21-24

Complete the summary below. Choose **ONE WORD ONLY** from the passage for each answer.

A New Approach to Knowledge

John Ray was a scholar and self-taught botanist, whose work reflected the **21** that was taking place during the 17th century in people's way of thinking about the natural world. This new approach is the basis of the modern field of **22** It represented a complete break from the **23** ideas of Aristotle, which had dominated thinking up until that time. As Ray himself explained, his interest in plants was aroused after graduating, when he had to spend time outdoors after a period of **24** He taught himself, in addition to many Cambridge students, and began compiling his catalogue of plants, which was published in 1660.

Questions 25 and 26

Choose **TWO** letters, **A-E**. Which **TWO** of the following statements are true of Ray's early life?

- A.** His teacher recommended that he should go to university.
- B.** His school record was not exceptional in any way.
- C.** He was helped by a former student of Cambridge University.
- D.** His parents were both valued by the people in their local area.
- E.** He originally planned to take up his father's occupation.

READING PASSAGE 3

You should spend about 20 minutes on Questions 27 - 40, which are based on Reading Passage 3 on pages 10 and 11.

Manage Your Energy, Not Your Time

by Tony Schwartz and Catherine McCarthy

At our company, the Energy Project, we have worked with thousands of executives and, with remarkable consistency, they tell us they're pushing themselves harder than ever to keep up. The problem with working longer hours is that time is a finite resource. However, energy is a different story. Energy comes from four main wellsprings: the body, emotions, mind and spirit and, in each area, energy can be systematically expanded.

Most organizations invest in developing employees' knowledge and competence but few help build and sustain their energy. In fact, greater energy makes it possible to get more done in less time at a higher level of engagement.

The Body

It is scarcely news that inadequate nutrition, exercise, and rest diminish our basic energy levels. Nonetheless, many executives don't practice healthy behaviors, given all the other demands in their lives. When Gary Faro, from Wachovia Bank, began our program, he was overweight, lacked an exercise routine and slept for five hours a night. That is not unusual among the leaders we see. Faro began cardiovascular training, started going to bed at a designated time and changed from two big meals a day to smaller meals every three hours. He lost weight, and his energy soared. 'I used to schedule tough projects for the morning, when I knew that I would be more focused,' Faro says. 'I don't have to do that anymore because I find that I'm just as focused now at 5 pm as I am at 8 am.' Faro also began taking brief breaks, leaving his desk at specific intervals. The value of such breaks is grounded in our physiology. 'Ultradian rhythms' are 90- to 120-minute cycles during which we move from a high-energy state into a physiological trough. Toward the end of each cycle, our systems crave recovery. The signals include restlessness and difficulty concentrating, but we often ignore them and keep working. Consequently, our energy reservoir burns down as the day wears on. While having breaks every hour or so goes against the culture of most organizations, their value is multifaceted.

The Emotions

Most people realize that they perform best when they feel positive. What surprises them is that they're not able to perform well when they're feeling any other way. Confronted with relentless demands, people slip into negative emotions often multiple times a day. This drains energy, causes friction between workers and makes it impossible to think clearly.

Deep abdominal breathing is one way of defusing negative emotions. When we began working with Fujio Nishida, from Sony, he would light a cigarette when something stressful occurred - at least twice a day. Otherwise, he didn't smoke. The breathing exercise we taught him worked straight away: he no longer desired cigarettes. It wasn't the smoking that had relieved his stress

but the relaxation from deep inhalation and exhalation.

Another ritual that fuels positive emotions is expressing appreciation, an action that seems to be as beneficial to the giver as the receiver - and the fuller and more precise it is, the higher the impact. Allocating time for this vastly increases the chances of success. Ben Jenkins, of Wachovia, has built his appreciation ritual into regular dinners with team members. He recognizes their accomplishments and talks with them about themselves and their aspirations, rather than their immediate work responsibilities.

The Mind

Many executives view multitasking as necessary but it actually undermines productivity. A temporary shift in attention - stopping to answer e-mails for instance - increases the time necessary to finish the primary task by as much as 25 per cent, a phenomenon known as 'switching time'. Dan Cluna, at Wachovia, now leaves his desk to go into a conference room whenever a task requires concentration and finishes reports in a third of the time they used to require.

Perhaps the most effective focus ritual executives can adopt is identifying each night the most important challenge for the next day and giving it priority the following morning. Jean Luc Desquesne, of Sony, used to answer e-mails as soon as he got to work. He now dedicates the first hour every day to the most important task and often emerges at 10 am feeling he's already had a productive day.

The Spirit

Most people live at such a furious pace that they rarely ask themselves what they stand for; external demands dictate their actions. We don't suggest that people explicitly define their values, because the results are usually too predictable. Instead, we ask questions, such as, 'What are the qualities you find most off-putting when you see them in others?' By describing what they can't stand, people unintentionally divulge what they stand for.

A New Focus

This new way of working depends on organizations adopting new behaviors. Organizational support entails shifts in policies and practices. However, one factor that hinders success is crisis mentality. Optimal candidates for our programs are feeling enough pain to be eager for new solutions but not so much that they're completely overwhelmed. At one organization where we had the active support of the CEO, the senior team couldn't tear their focus away from immediate survival - although taking time out might have allowed them to be more sustainably productive.

An explicit contract that benefits all parties will require organizations to shift their emphasis from getting more from people to investing more in them, so they bring more energy to work every day. For their part, individuals need to recognize the costs of energy-depleting behaviors and take responsibility for changing them.

Questions 27 – 30

*Do the following statements agree with the claims of the writers in Reading Passage 3?
In boxes 27-30 on your answer sheet, write*

YES *if the statement agrees with the claims of the writers*

NO *if the statement contradicts the claims of the writers*

NOT GIVEN *if it is impossible to say what the writers think about this*

- 27. Human beings have a fixed supply of energy.
- 28. People tend to experience hunger at the end of an energy cycle.
- 29. Taking regular breaks is seen as inappropriate in the majority of organisations.
- 30. Negative emotions in the workplace can increase staff absences.

Questions 31 – 35

Choose the correct letter, A, B, C or D.

Write the correct letter in boxes 31-35 on your answer sheet.

31 The writers mention ultradian rhythms to support their argument that

- A. we need to work for longer periods at a time.
- B. more intense activity should be encouraged.
- C. the human body requires regular downtime.
- D. overwork may lead to ill health.

32 According to the writers, many people are surprised to discover that

- A. they do well at work when they are optimistic.
- B. negative emotions provide an opportunity to improve relationships.
- C. consciously taking the right attitude can eliminate destructive emotions.
- D. a pessimistic approach prevents them from reaching their potential.

33 The writers believe that expressions of appreciation

- A. should be detailed in order to produce the best results.
- B. help us more than the recipient.
- C. should have a financial component.
- D. encourage others to work harder.

34 According to the writers, people can discover what their values are by

- A. putting into words what is most important to them.
- B. asking what their colleagues would think of a given action.
- C. anticipating how they would react in a given situation.
- D. considering what kind of behaviour offends them.

35 The most suitable candidates to undertake the writers' programmes would be

- A. those in an extremely stressful working environment.
- B. those who want to change but are still in control of their situation.
- C. those where the head of the company is committed to change.
- D. those that place the greatest value on innovation.

Questions 36 – 40

Complete each sentence with the correct ending, A-H, below.

Write the correct letter, A-H, in boxes 36-40 on your answer sheet.

36. Gary Faro has found that after changing his diet, exercise and sleeping patterns

37. Through working with the writers, Fujio Nishida discovered

38. Ben Jenkins has established a ritual in which

39. Dan Cluna decided to spend time in another part of the building so that

40. Jean Luc Desquesne found that by changing the time that he responds to emails

- A. he acknowledges other people's achievements and discusses life outside the workplace.
- B. he gets a sense of accomplishment early in the day.
- C. he has gone against the company culture.
- D. he could immediately adopt a positive technique to help him cope with pressure.
- E. he could not believe the favourable results.
- F. he no longer needs to complete challenging tasks at a certain time of day.
- G. he could complete challenging tasks more quickly.
- H. he found other workers have responded positively.
